

*Fine China*

**JACOBEBEAN**

*wide rim ~ embossed ~ footless or footed*

- **DURABILITY AND STRENGTH:** The best raw materials and manufacturing processes are combined to produce a shape designed specifically to withstand the “back of the house”, as well as the “front of the house”, handling challenges in a typical high volume foodservice environment.

- **GUARANTEE:** Designing, producing and supplying dinnerware and ceramics products for over 200 years, Dudson has specialized exclusively in the foodservice and hospitality industries for the last 110 years. Dudson remains a family owned pottery today. Because our products are made exclusively for foodservice operations, you can rest assured that we guarantee that your Dudson products will live up to the your expectations while providing the desired ambiance and exceptional return on your investment.

- **DECORATIONS:** All decorations — with the exception of precious metals — are applied under the glaze. This is an important and almost unique feature that guarantees the protection of the decoration and will slow down the aging process. Decorations applied under the glaze are also protected from chemical or detergent attacks, as well as lead and cadmium release from colors like the deep, rich reds and blues.

- **FULLY GLAZED FOOTLESS & FULLY GLAZED FOOTED PROFILES:** By pin firing the product, the opportunity for scratching and metal marking transfer is substantially reduced. The fully glazed footless and footed profiles are easier to clean and, therefore, more hygienic.

- **HEAT RETENTION:** The extreme density of the body and the inclusion of added alumina oxide in our clay and mineral mixtures ensures a much higher level of heat retention. Rapid heat transfer away from many highly porous ceramic bodies and non-porous glass products does not occur with the Dudson body. Density is the key to heat retention.

- **QUALITY AND CONSISTENCY:** The British Standard “kitemark”, present on every piece of Dudson product, is your guarantee that all Dudson products do meet the stringent requirements of the independent British Standards office through regular monitoring and testing of the Dudson manufacturing process. Although the American Standards’ Association does not offer clear minimum standards for ceramics in the foodservice industry, Dudson complies and/or exceeds FDA standards for food safety and Proposition 65 (California state lead and cadmium release standards).

● **EMBOSSMENT:** The sculpted embossment offers a pure, sharp, exquisite pattern without the added cost of a decoration. Jacobean has been defined as a timeless classic, responding to the aesthetic criteria of today's contemporary and traditional décors. Crystal pattern offers three additional pieces to accent the range even further.

● **FINE EDGE PROFILE:** This upscale fine dining profile is yet another opportunity to carefully select the right shape for the right application. Often times, the rolled edge pieces can be mixed with the fine edge profile to maximize aesthetic impact while minimizing unnecessary replacement costs. Jacobean will appeal to the finest establishments and the Chef will appreciate the wide rim "canvas" to frame his or her culinary masterpiece.

Jacobean "fine edge" profile

New Jacobean "rolled edge" profile

● **ROLLED EDGE PROFILE:** This particular profile has been designed to offer foodservice operators the ability to select key pieces from both Jacobean ranges to assist in the determination of items typically exposed to a "high frequency handling" environment, for instance in banquet and/or catering facilities, hotel room service, cruise line dining, and casinos. The number of times that the ware is handled from the table top through ware washing will enable you to determine which item is best suited for the purpose. The rolled edge profile guarantees exceptionally high performance and significantly minimizes edge chipping.

● **WHITENESS:** With a high alumina oxide content added to our "secret" recipe, Dudson is able to create a body that emulates the whiteness, translucency and strength typically found in many bone china products. This has been achieved without using any animal bone ash.

● **SHAPE AND DECORATION LONGEVITY:** Dudson's entire production is exclusively devoted to the foodservice and hospitality industries. This translates into a total commitment to commercial operators often subjected to pattern or shape discontinuance from retail china manufacturers following retail trends.

● **WEIGHT AND STORAGE:** The unique design of the Dudson shapes and profile increases stacking capacity by at least 25% to 50% while reducing weight and required storage space by the same factor. This reduced weight is recognized and welcomed by the operators' staff responsible for handling the product.

● **MICROWAVE AND DISHWASHER SAFE:** All Dudson products are produced with one of the toughest and highest quality glazes available in the industry. They are designed to withstand chemical and detergent attacks while remaining totally safe in the microwave (precious metals, of course, excluded)
